Adresse : Morocco, Agadir

Profil

Laravel junior backend developer, trained at Simplon Maghreb's intensive bootcamp (JobinTech). Experience creating REST APIs, doing data modeling (Merise), and connecting AI APIs (Groq). Independently acquired DevOps abilities: Docker containers, CI/CD with GitHub Actions, deploying to AWS, infrastructure as code via Terraform, and test automation with Pest. Also works with Angular and MySQL.

Seeking opportunities as a backend or fullstack developer (Laravel/Angular).

Technical skills

Backend: PHP/Laravel - RESTful APIs - Postman

Frontend: Basics Angular / Blade

Database: MySQL - Eloquent ORM

Version control : Git - GitHub

Planning: Jira (Method Agile)

AI Tools: Opencode, Openspec, laravel/ai SDK.

DevOps: Docker - GitHub Actions (CI/CD) - AWS - Terraform.

Automation: N8N.

Professional experiences

Graphic Design - Freelance

Mar-01 / 2026

- Creation of visual advertising content for print.

Design of print materials and photo retouching for a diverse clientele.

- Photography

Photography and retouching of products, portraits, and events (Photoshop, Lightroom).

Graphic designer and stage technician - souss prestations services

Feb-23 / Jui-24

- Creation of advertising materials and operation of large-format printing machines.

Creation of business cards, flyers, and catalogs, from layout design to the preparation of final files for printing.

Projects

FreelanceScope (Project of end course)

Laravel - APIrest - Angular 29/07/26

FreelanceScope is a platform designed for freelancers to manage client projects from start to finish, including client management, breaking projects down into features, AI-assisted estimation (duration, difficulty, cost), and PDF quote generation.

- Infrastructure: Docker containerization (frontend, API, and dispatch service running as separate Compose projects).
- Integration of the Groq API for automated task estimation (duration, difficulty, cost) based on project descriptions.
- Frontend: Angular (standalone components, signals) consuming the API via typed services.
- Deployment: CI/CD using GitHub Actions, Infrastructure as Code with Terraform, and deployment on AWS.
- Asynchronous processing: Queues and jobs for PDF quote generation without blocking the user interface.
- Documentation using Scribe.

ThreadForge API

Laravel - APIrest 22/06/26

ThreadForge API is a headless backend solution (pure REST API) built with Laravel. It enables tech content creators to automatically transform raw technical notes into posts optimized and tailored for X (Twitter). The application decouples writing style from content using reusable configurations ("Blueprints") and integrates an AI agent equipped with tools and memory to refine generated content on demand.

- REST API, Laravel AI SDK, Queues & Jobs, Postman testing, Azure, CI/CD, documentation via Scribe.

CandidatureTracker

Laravel - Blade 18/05/26

CandidatureTracker Laravel – a personal job search tracking application. Users log applications by company, link interview stages to each record, track the progress of each opportunity, and archive completed records while preserving the history.

- Pest, full CRUD for applications and interviews, Laravel Breeze, Blade templating.

Degrees and training

Course Backend Laravel AI augmented Simplon Maghreb - JobinTech

2026 - AGADIR

Development Web Full-Stack Big academy - American institute for applied education

2023 - AGADIR

DEUG in English Studies University Ibn Zohr

2020 - AGADIR

Languages

Arabic: Native language – **French**: Technical proficiency – **English**: Operational proficiency
